Report No. 76

Second 1/2A Fubar 600

April 28, 2020

Yesterday I managed to get started on the fuselage preparation for red silk covering. The fuselage had already been given three coats of Randolph's 50/50 clear nitrate dope with light sanding in between coats. The open structure of the fin and rudder were covered with Larry Davidson's Polyspan Lite and given two coats of 50/50 clear nitrate dope as below. This morning I brushed the third coat of clear dope on the Polyspan Lite P Lite. The double covering of silk covered over Polyspan Lite on open structure will give the silk a life almost indefinite. However, Polyspan Lite covering is not required on remaining solid sheeted structure. I will begin covering the fuselage with red silk this afternoon.

.....Tandy
