Report No. 93

*Second 1/2A Fubar 600**May 14, 2020*

This morning with not much else to do, I decided to make holding fixtures using 1/16" dowel and some pine blocks I had in the attic. The picture below shows the Fubar's rudder, forward hatch, aft hatch, and the cowl all supported on these individual fixtures and ready to be spray painted with clear satin Klass Kote. However, the doped red silk needs to dry out for several more days first. I will probably do the do the Klass Kote spray painting next Monday or Tuesday morning if the UltraCote Lite for the wing covering is delayed in getting here.....Tandy
