Report No. 19

*Veco Pursuit*

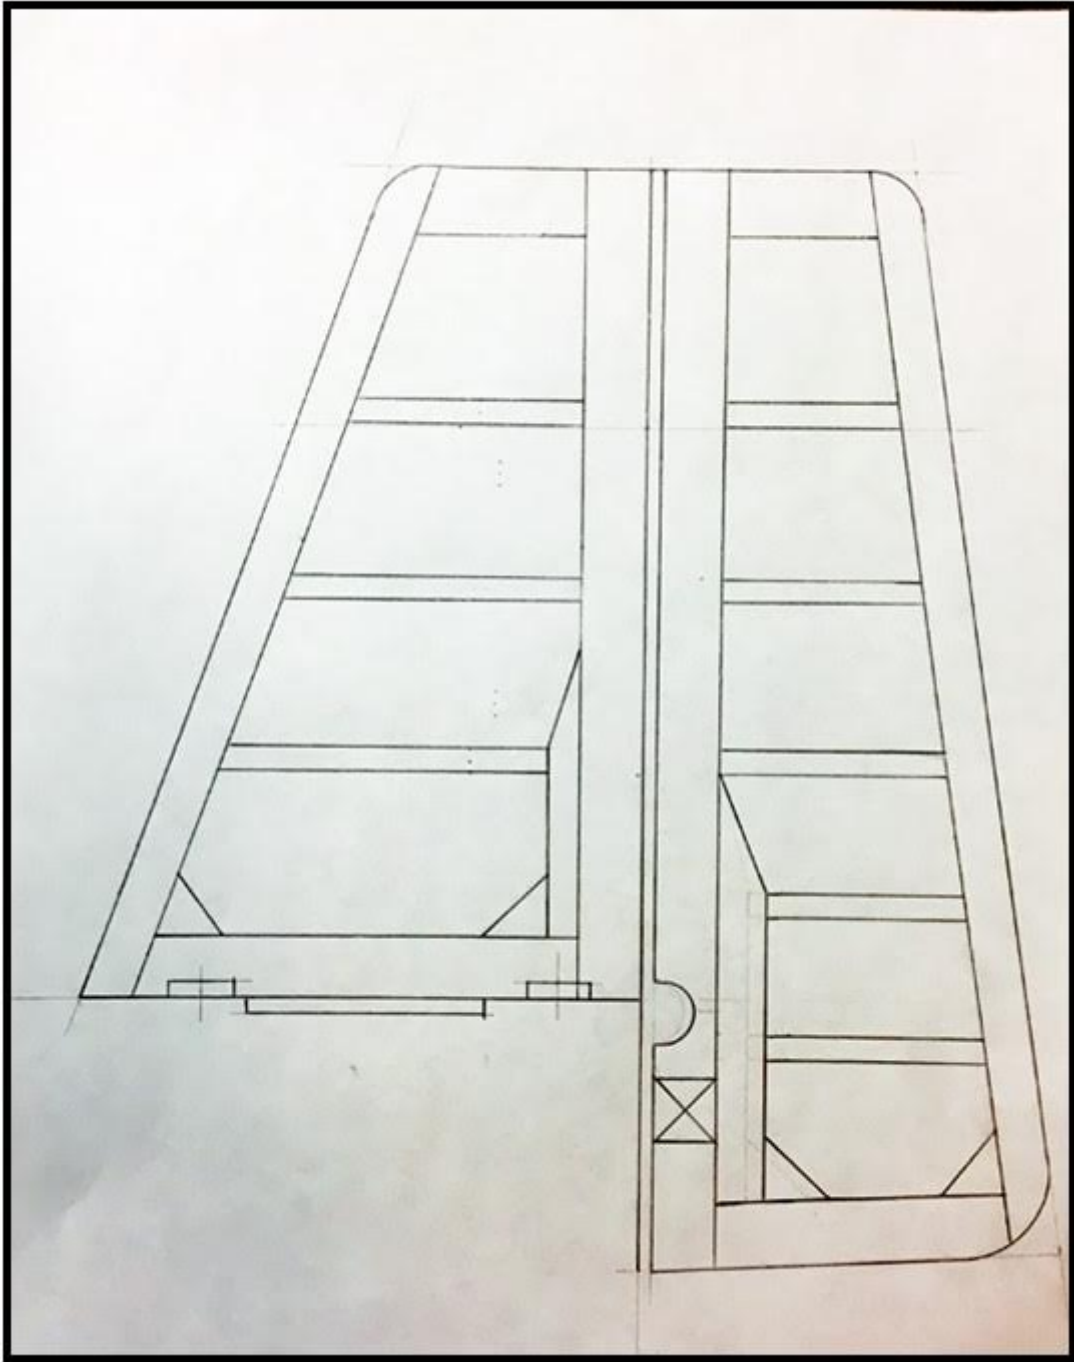

*September 27, 2021*

In Report No. 16, the critical dimensions were presented in the picture below.

The structural design for the removable vertical tail was completed today and the view of the full size plan is shown below. The fin's trailing edge is 3/16" X 1/2", the leading edge is 3/16" X 3/8", and the ribs are 3/16" sq. The rudder's leading edge is 3/16" X

1/2", the trailing edge is 3/16" X 3/8", and the ribs are 3/16" sq. The fin will have wider "foot print" with the fuselage's turtle deck fairing on each side of the base.

I still have to wait for the balsa delivery from Sig Manufacturing before I can start construction.....Tandy
