Subject: 46Tip Panel Rib Proof Test

In order to check the rib-to-rib shape and spar notch accuracy, I stacked and aligned the 9 ribs by placing a 3/16" balsa strip in the top main spar notches as shown below. This then allowed me to check the other 6 spar notches. With a little trimming on a couple of rib notches, everything was within acceptable tolerance, considering these rib patterns were drawn on bond paper and cut out of 1/8" sheet balsa by hand with a single edge razor blade.....Tandy
