Subject: 53 Both Wing Tips Fully Integrated

I spent most of the day today shaping the soft balsa filler pieces I had added to both top and bottom of the Bobmer's right wing tip spline. It took me a long time to develop the wing tip contour and I generated a ton of balsa shavings and sand dust in the process. Now both of wing tip panel structures are complete as shown below. I will do some final finish sanding on these panels before I begin joining them to the wing's center section.....Tandy
