Subject: 87 Wing saddle Cushion

Today I went to the hobby shop and picked up a couple of packages of rolled DuBro single sided foam tape for the Bomber's wing saddle cushion. I used Dubro's black foam tape that is 1/8" thick and 3/8" wide. I applied the tape around the edges of the wing saddle and put one strip of tape down the middle as shown below.

The picture below shows the big Bomber wing rubber banded to the wing saddle on top of the pylon.

I think this was the last remaining task that completes this Class C Bomber. Now, I have to range check the radio installation. Then I will operate the radio with the McCoy 60 running and check for ignition interference. I hope to flight test this new model sometime this month, if I can find someone to crew for me.....Tandy
