Subject: Cleveland Cloudster

Good Morning Dave,

While going through my collection of plans this afternoon, I ran across a set of hand drawn Cloudster plans shown below. A number of years ago Dick Huang ran me off a copy of his set that he had gotten from Jim Adams. Jim had apparently drew them up for 1/2A Texaco because the plans show an R/C version using a Cox .049 for power.

Shown below is the title block on these plans. The plan is dated 1938 so it would be an Antique and it is gas powered so it should qualify for the SAM Speed 400 electric event. However, before I scale these plans, I need some validation that this set of hand drawn plans would be legal for the Speed 400 electric event. Please respond.....Tandy
