Subject: 21 J-3 Cub Stab Templates

The stabilizer and elevator spline paper patterns were traced from the plan and cut them out. Then the two stabilizer and elevator spline templates were made out of 3/32" card board. If you remember, Mike Midkiff recommended that the stabilizer and elevator be made a single unit structure. So after waxing the edges of the templates entire perimeter, they were pinned down on the plan. Three pieces of the scrap 3/32" card board were glued to the two templates as shown below to lock them together. Three long 1/24" X 1/8" strips were stripped off from 1/8" sheet balsa and are currently soaking in hot water. These strips are long enough to form the spline completely around the left side of the horizontal tail. The composite template below has to be used again to make the right side of the stab spline.Tandy
