Subject: 58 J-3 Cub Request for Advice

Good Morning Group,

I am going to work on the landing gear fairings today. However, in anticipation of what is coming up, I would like some advanced advice on three of the remaining efforts. The picture below shows the forward part of the J-3 Cub's fuselage as it is today.

I have three coats of clear dope on the nose block, but as you can see it is not yellow like the tissue on the fuselage. I do not think I can successfully cover the nose block with yellow tissue, so I am left with trying to paint it and match the yellow tissue color. (1) [What type of yellow paint should I use to paint the nose block and where do I get it?](#) I also need to paint the four engine cylinders, the two main wheels, and the tail wheel a flat black. (2) [What type of black paint should I use and where do I get it?](#) After I cut out the openings for the windows, I need to install the windshield and side windows. (3) [What type of clear material should I use and where do I get it?](#) Once I use the windshield and side window patterns to cut out the clear windshield and side windows material, they have to be bonded on to the fuselage. (4) [What adhesive is recommended for bonding the window material to the fuselage, especially the windshield and where do I get it?](#) I would most appreciate inputs from you guys on these four questions.....Tandy
