Subject: 22 Lancer 850 - Making Wing Tips (Part 3)

New Cyclone Lancer 850

December 23, 2017

This morning after finishing all of my "honey does" for Sue, I manage to get the three pieces for the left wing tip cut out, sanded to shape, and pre-glued joint faces of each piece. A piece of wax paper was placed over the left wing half plan and the pieces glued and pinned down using aliphatic glue as shown below.

Then all of balsa shavings on the floor were swept up and all of the tools were put away. This completes both wing tips and it is a great time for me to put this project aside until after the Christmas holidays.

Merry Christmas Everyone

(from Tandy and Sue)
