Subject: 99 Lancer 850 - Removable Stab Fuselage Attachment (Part 2)

Report No. 99

New Cyclone Lancer 850

March 28, 2018

This morning the four screws in the stab were taken out and the stab lifted off the structure to remove the wax paper. The two 1/16" plywood mounting plates were glued and perfectly aligned on the stab's 1/4" platform as you can see below.

The stab was put back on and held in place with the four screws shown below. Nylon washers were used instead of metal which helps hold the screws tight.

This shows the stab mounted on the fuselage's structure. The stab is large with a 32" span.

However, when the 83" wing was put in place, the stab looks small as you can see below.....Tandy
