Subject: 9 Cleveland 80" Playboy Senior - Straightening the Stab's Rear Spar

Cleveland 80" Playboy Senior

March 18, 2107

While framing the elevators this morning, I placed the rear stab spar up against the elevator spar and noticed that the stab's preformed leading edge had slightly distorted (bowed) the stab's main rear spar. To eliminate the distortion, a 1/2" inch aluminum angle straight edge was clamped to the stab's rear spar forcing it into straightness. Then using 3/32" square diagonals, a Warren truss was installed between the center spar and rear spar down the entire length of the stab span as you can see below. Once this dries, the slight deformation should eliminated.....Tandy
