Subject: 74 Rocketeer A - Fin, Rudder, and Sub Rudder Covering with Polyspan LiteWeb Site: [Tandy's Model Aircraft](#)*Rocketeer A**March 9, 2015*

It has been raining here in North Texas all day so I decided to continue covering with Polyspan Lite and doping. The fin, rudder, and sub rudder were covered and given three coats of 50/50 nitrate dope as you can see below. I am still waiting on the yellow silk to arrive from Michigan.

I have decided to wait on covering the wing and stab with Polyspan Lite until I rethink how I want to cover them. I might want to switch to transparent yellow UltraCote Lite to cover the wing and stab with or maybe even an UltraCote Lite multi-color scheme involving red or blue or even white. However, I may just go on as I originally planned and double cover them with yellow silk over Polyspan Lite.....Tandy
