Subject: 94 Rocketeer A - Rudder and Elevator Hinging Complete*Rocketeer A**April 10, 2015*

All of our Oak trees here in Arlington have released their pollen and are leafing out now. The April winds are blowing the yellow pollen power everywhere and the air is filled with the stuff. The rains will eventually wash all of this away, but until it does, spraying Klass Kote on the Rocketeer's fuselage and wing is out of the question.

So yesterday, I permanently bonded in the rudder and elevator Klett hinge halves. This morning I installed the tail assembly on the fuselage's stab mounting for a trial fit and everything checked out OK. I placed the wing on the fuselage's wing saddle and took this picture for you to see.

After the fuselage and wing are sprayed with Klass Kote, the covering over the side windows will be cut out and the windscreen and side windows installed. I should also be receiving the wing graphics from Callie Graphics any day now. Once they are put on, the equipment will be installed and model will be assembled. Once a final weight and balance is performed and a radio range check made, the Rocketeer A will be ready to be ready for flight testing.....Tandy
