Subject: 72 Sailplane Horizontall Tail Polyspan Lite Base Covering

Comet Sailplane Project

Covering the top of the Sailplane's stab was more straight forward than covering the undercambered bottom surface. I had to use the heating iron a lot more, especially out around the tips. However, the Polyspan Lite top covering turned out very well as shown below.

This is another shot in an attempt to show you how incredibly smooth the Polyspan Lite covering is.

Since I took these pictures, I have applied a coat 50/50 nitrate dope to the covering. The thing I really like

about Polyspan Lite is that the dope does not glob underneath the covering like it does with silk.

Since Friday is Sue's birthday, I am going to take a break from the Sailplane. We are going to drive down to San Antonio for the weekend. We have reservations at the Hilton's Palacio del Rio hotel with a private balcony overlooking the River Walk. We will have a great weekend.....Tandy
